

MSC THERMAL BLANKET

The thermal blanket solution can be used for any commodity, including consumable goods. Its reflective material helps to regulate the inside temperature and avoids your cargo being contaminated or damaged by water and temperature changes. Non-toxic Calcium Chloride Moisture Absorbers are also included in the installation.

The thermal blanket works essentially like a bag inside the container. The temperature inside the container can fluctuate between -25 degrees and +60 degrees. Due to the temperature fluctuation, condensation inside the container can be found.

- The reflective material reflects the heat, reducing the damages created by the variation in temperature
- The blanket is vacuum sealed around your cargo to minimize the possibility of condensation
- The Calcium Chloride absorbs moisture

WHAT IT CAN BE USED FOR?

COFFEE

COCOA

TOBACCO

FOODS AND BEVERAGES

WINE

CHEMICALS
